                                                                                                                                                                                                    RMA was isolated from the plasma of a HCV seropositive human (designated "LG") and cDNA was prepared from it. The cDNA was PCR amplified using specific primers with sequences based on the prototype HCV-1 CDNA sequence (GENBANK M62121). Further amplification using nested primers resulted in 7 adjacent HCV DNA fragments which could be assembled into a full-length sequence. The DNA sequence was determined and translated into the genomic amino acid sequence. Comparison of the LG genomic amino acid sequence with that from HCV-1 showed 134 amino acid differences.
                                                                                                           New plasmid pHCV-162 is a mammalian expression systems for HCVD proteins - useful for diagnosing HCV infection and as vaccines for preventing HCV infection

                                                                                                                                      The sequence is encoded by the composite cDNA of AAN90327. These antipens react with antibodies in patients with non-A non-B hepatitis (NANBH). They can be used to diagnose HCV-induced NANBH, to raise antibodies for immunoasasy or treatment, or to produce vaccines. (Updated on 25-MAR-2003 to correct PR field.)

It is the sequence encoded in the open reading frame of hepatitis C virus (HCV) cDNA inserts in clones K9-1 through 15e. It is antiqenic and could be used in immunoassay reagents and vaccines and to generate antibodies useful in diagnosis and passive immunotherapy for HCV infection/non-A, (Updated on 25-MAR-2003 to correct PR field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A.Experimental source: isolate HC-JI

C.Superfamily: hepatitis C virus genome polyprotein

C.Keywords: ATP; glycoprotein; hydrolase; nucleotide binding; P-loop; polyprotein; serin

C.Keywords: ATP; glycoprotein; hydrolase; nucleotide binding; P-loop; polyprotein; serin

F; 115-115/Product: envelope protein C *status predicted <CPC>

F; 116-191/Product: major envelope protein B *status predicted <NEE>

F; 390-729/Product: major envelope protein NSI *status predicted <NSI>

F; 300-1006/Product: nonstructural protein NSI *status predicted <NSI>

F; 1230-1237/Region: nucleotide-binding motif A (P-loop)

F; 1312-1317/Region: DEXH motif

genome polyprotein - hepatitis C virus (strain Taiwan)
N;Contains: capsid protein C; envelope protein M; hepacivirin (EC 3.4.21.98) (nonstruu protein NS4s, nonstructural protein NS5 c; Species: hepatitis C virus
A;Note: host Homo sapiens (man)
C;Date: host Homo sapiens (man)
C;Date: al-Dec-1992 #sequence_revision 31-Dec-1992 #text_change 19-Jan-2001
C;Accession: A40244
R;Chen, P.J; Lin, M.H.; Tai, K.F.; Liu, P.C.; Lin, C.J.; Chen, D.S.
Virology 188, 102-113, 1992
F;1616-1862/Product: nonstructural protein NS4a *status predicted <NV4>

Micontains: capsid protein - hepatitis C virus (strain HC-J8)
Nicontains: capsid protein C; envelope protein M; hepacivirin (EC 3.4.21.98) (nonstructein NS4s; nonstructural protein NS4b; nonstructural protein NS5
C; Species: hepatitis C virus
C; Species: bapatitis C virus
C; Date: 31-Dec-1992 #sequence_revision 31-Dec-1992 #text_change 19-Jan-2001
C; Accession: A40250; PQ0397; PQ0559

MOSTION: THE SMALL PROFIEID NEWBRANE-RELATED FUNCTION.

MOSTALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6 position, Cys or Thr in Pl and Ser or Ala in Pl'.

CATALYTIC ACTIVITY: N nucleoside triphosphate - N diphosphate + (RNA)(N).

CHALYTIC ACTIVITY: N nucleoside triphosphate - N diphosphate + (RNA)(N).

CHOPROTEIN ENVELOPE: THE ENVELOPE CONSISTS OF TWO PROTEINS: PROTEIN GRAND RANA.

PROTEIN CAND MRNA.

CHORDOR AND MRNA.

Medecular cloning of hepatitis C virus genome from a single Japanese cariter: sequence variation within the same individual and among infected individuals.";
Virus Res. 23:39-53(1992).
C PURCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE PURDPHOBIC, SIGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.
NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.
NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.
C CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6 possition, Cys or Thr in Pl and Ser or Ala in Pl'.
C CL- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
                                                                                                                                                     Ol-APR-1993 (Rel. 25, Created)

Genome polyprotein (Contains: Capsid protein C (Core protein) (P22);
Envelope dlycoprotein El (GP32) (GP35); Envelope glycoprotein E2
(GP68) (GF70) (NG1); Protean P7; Nonstructural protein NS2 (P21)
(EC 3.4.21.98); Nonstructural protein NS4A (P4); Nonstructural protein
NS4B (P27); Nonstructural protein NS5A (P56); Nonstructural protein
NS5B (P60) (P70) (RNA-dlicected RNA polymerase) (EC 2.7.7.48)].
Hepatitis C virus (isolate HC-J6) (HCV).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (RNA)(N).
-1- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY LIPOPROTEIN ENVELOPE CONSISTS OF TWO PROTEINS: PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA
                                                                                              PRT; 3033 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      InterPro; IPR002868; HCV_NS5a.

Genome polyprotein [Contains: Capsid protein C (Core protein) (P22);
Envelope glycoprotein E1 (GP32) (GP35); Envelope glycoprotein E2 (GP68) (GP70) (NS1); Protein P7; Nonstructural protein NS2 (P21) (EC 3.4-22-7); Protease/helicase NS3 (P70) (Hepacivirin)
(EC 3.4-21-7); Nonstructural protein NS5A (P56); Nonstructural protein NS5B (P66); (P70) (RNA-directed RNA polymerase) (EC 2.7.7.48)].
NSSB (P65) (P70) (RNA-directed RNA polymerase) (EC 2.7.7.48)].
Vinuses; SSRNA positive-strand viruses, no DNA stage; Flaviviridae;
                                                                                                                                                                                                                                                                                                                                                                                 VITOLOGY 188:331-341(1992).

-!- FUNCTION: THE SMALL PROTEINS NSZA, NSZB, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.

NS3 AND NS5 MAY ELAY A ROLE IN THE VIRAL RNA REPLICATION.

-!- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6 position, Cys or Thr in P1 and Ser or Ala in P1'.

-!- CATALYTIC ACTIVITY: N nucleoside triphosphate - N diphosphate +
                                                                                                                                                                                                                                                                                  MEDIINE-92230232; PubMed-1314459; Okada S.-I., Yamamoto K., Lizuka H., Tanaka T., Fukuda S., Tsuda F., Mishiro S.; Tanda S., Tsuda F., Mishiro S.; Full-length sequence of a hepetitis C virus genome having poor homology to reported isolates: comparative study of four distinct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (RNA)(N).
-1- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLECCAPSID COVERED BY LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS: PROTEIN M AND GLYCOPROTEIN E. THE NUCLECCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -1- SIMILARITY: THE PROTEASE BELONGS TO PEPTIDASE FAMILY S29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        IPR002166; HCV_RdRP.
